

VERTICUT 2000-M

The exceptional value, hydraulically powered, vertical package cut off saw with integrated even ending system and outfeed deck

**Full line of package
cut off saws
to meet every need**

The saw allows a single operator to complete a quality cycle under 55 seconds. Our shorter, stiffer bar is guided vertically through the lumber package, allowing it to consistently maintain cutting tolerances of ± 0.040 ". This specially designed, precision chain saw's thin 3/8" kerf gives you more efficient lumber recovery and a surface finish as good or better than a conventional trim saw.

Standard machines handle 16' or 20' lumber packages.

The on-board hydraulic power unit has a 1 HP motor driving a gear pump. The VERTICUT 2000 comes complete with hydraulic cylinder and controls for powered saw bar actuation through the cut.

After the package of lumber is on the support frame against the alignment stands, the saw is precisely positioned using a manual "V" wheel geared drive for the next hydraulically actuated cut cycle.

OPTIONS

- Laser light saw line guide.
- Electronic length measurement with digital readout.
- Powered saw carriage positioning.

MADE IN NORTH AMERICA

This saw features high quality, locally available components and can be maintained without the need of outside factory technicians or special equipment.
